

DESIGN PHASE / Solo Activity

# **Solution Realization Diagram**

A technical description of the aspired solution via Solution Building Blocks.

## Why to create a Solution Realization Diagram?

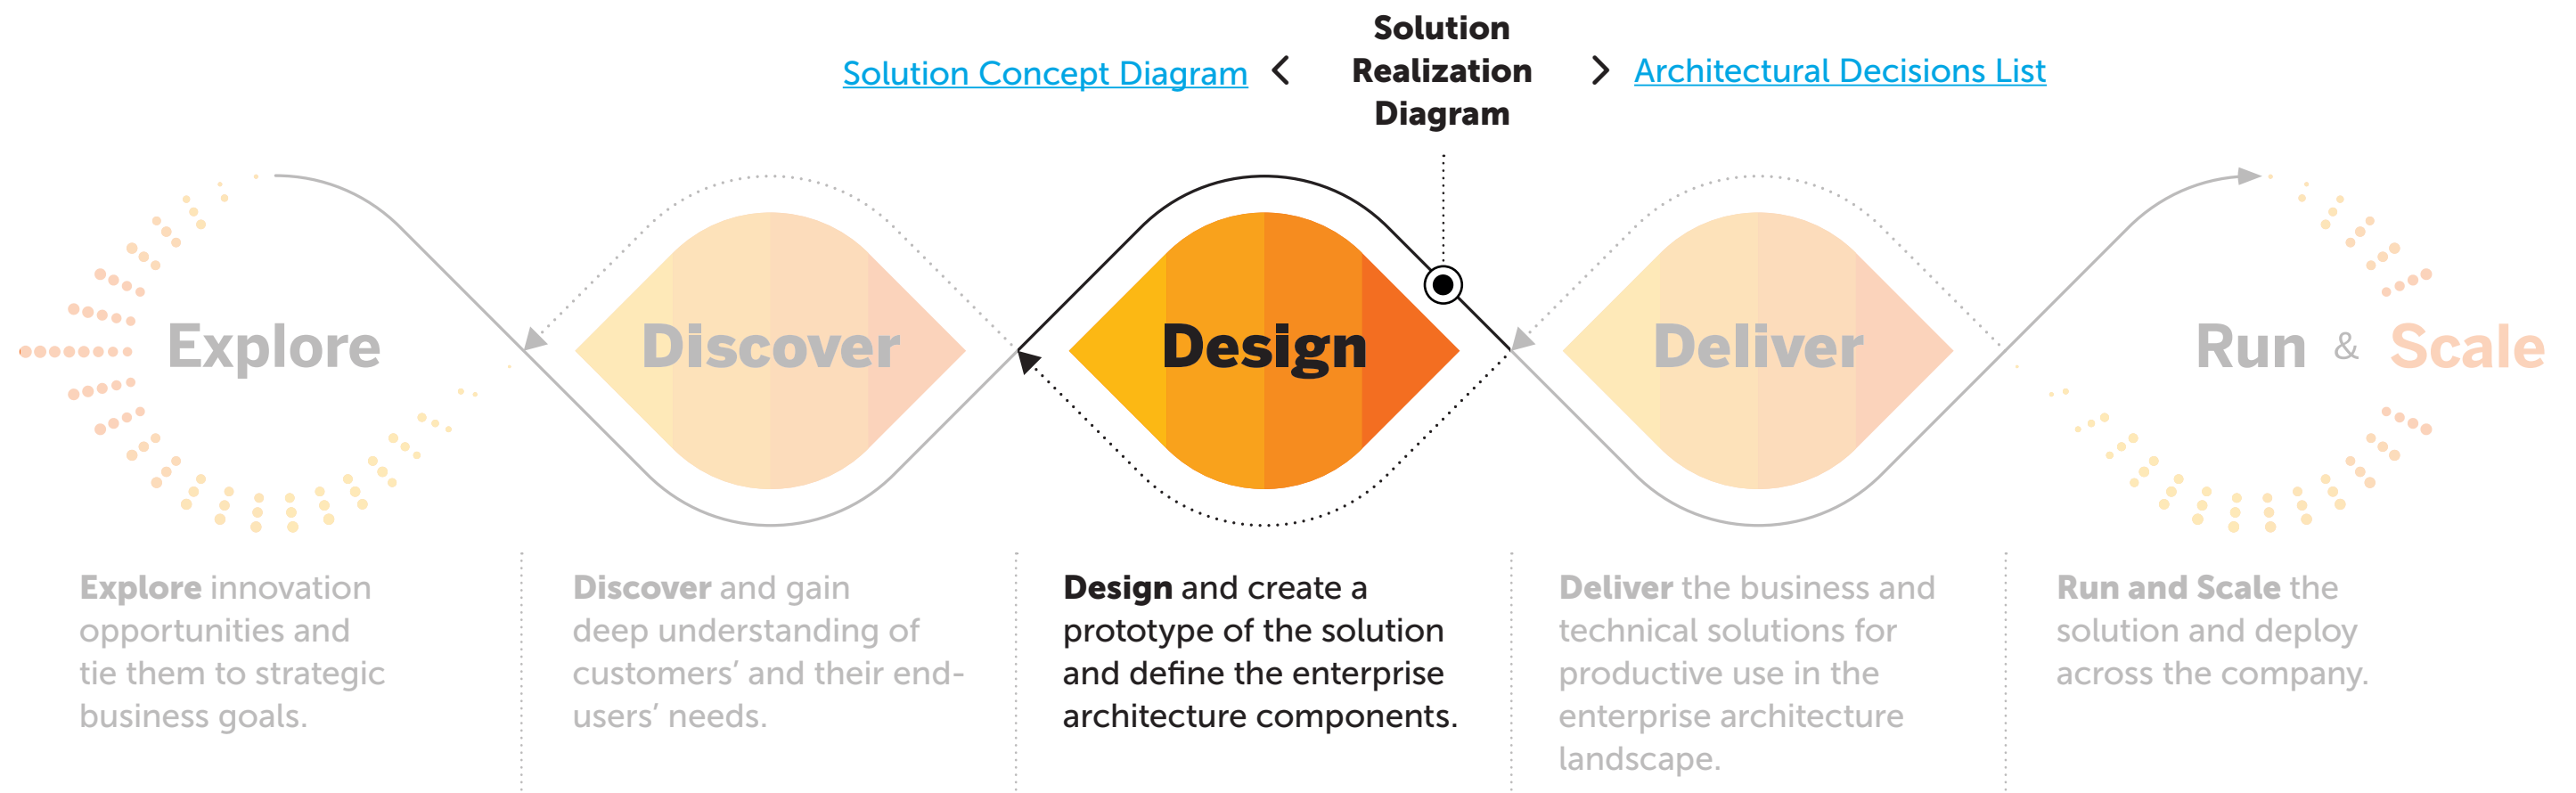

The Solution Realization Diagram describes your target architecture by breaking the aspired solution into functional components based on solution building blocks (SBB).

The purpose of the Solution Realization Diagram is to add technical details so that it can be used for the implementation phase of the aspired solution.

Solution Building Blocks are product or vendor-aware and can be either developed or procured. With the Solution Building Blocks you outline which products, like cloud services, are used, or need to be developed, in order to realize and implement the aspired solution/ its architecture building blocks.

# When to create a Solution Realization Diagram?

The Solution Realization Diagram is created during the Design phase after the [Solution Concept Diagram](#).

# How to create a Solution Realization Diagram?

Duration  
**30 - 120 Minutes**

Participation  
**1 - 3 People**

Roles  
**Architects**

Use input from

- [Baseline Solution Architecture](#)
- [Solution Concept Diagram](#)
- [SAP Discovery Center \(vendor specific information sources\)](#)
- [SAP API Business Hub](#)

## Steps

- 1** Identify Solution Building Blocks that realize the previously identified Architecture Building Blocks (ABBs). Map the Architecture Building Blocks of the [Solution Concept](#) to one or more Solution Building Blocks. Sources for Solution Building Blocks are the [Baseline Solution Architecture](#) (perform a fit-gap-analysis) and vendor specific information sources like the [SAP Discovery Center](#) for SAP BTP Solution Building Blocks (SBBs).
- 2** Outline the dependencies between the identified SBBs (functional dependency in terms of request-response and/ or information flow)
- 3** Add users and roles currently interacting with the SBBs.
- 4** Check the Solution Realization Diagram for completeness, by verifying that each ABB from the Solution Concept is addressed with SBBs.

## Expert Tips

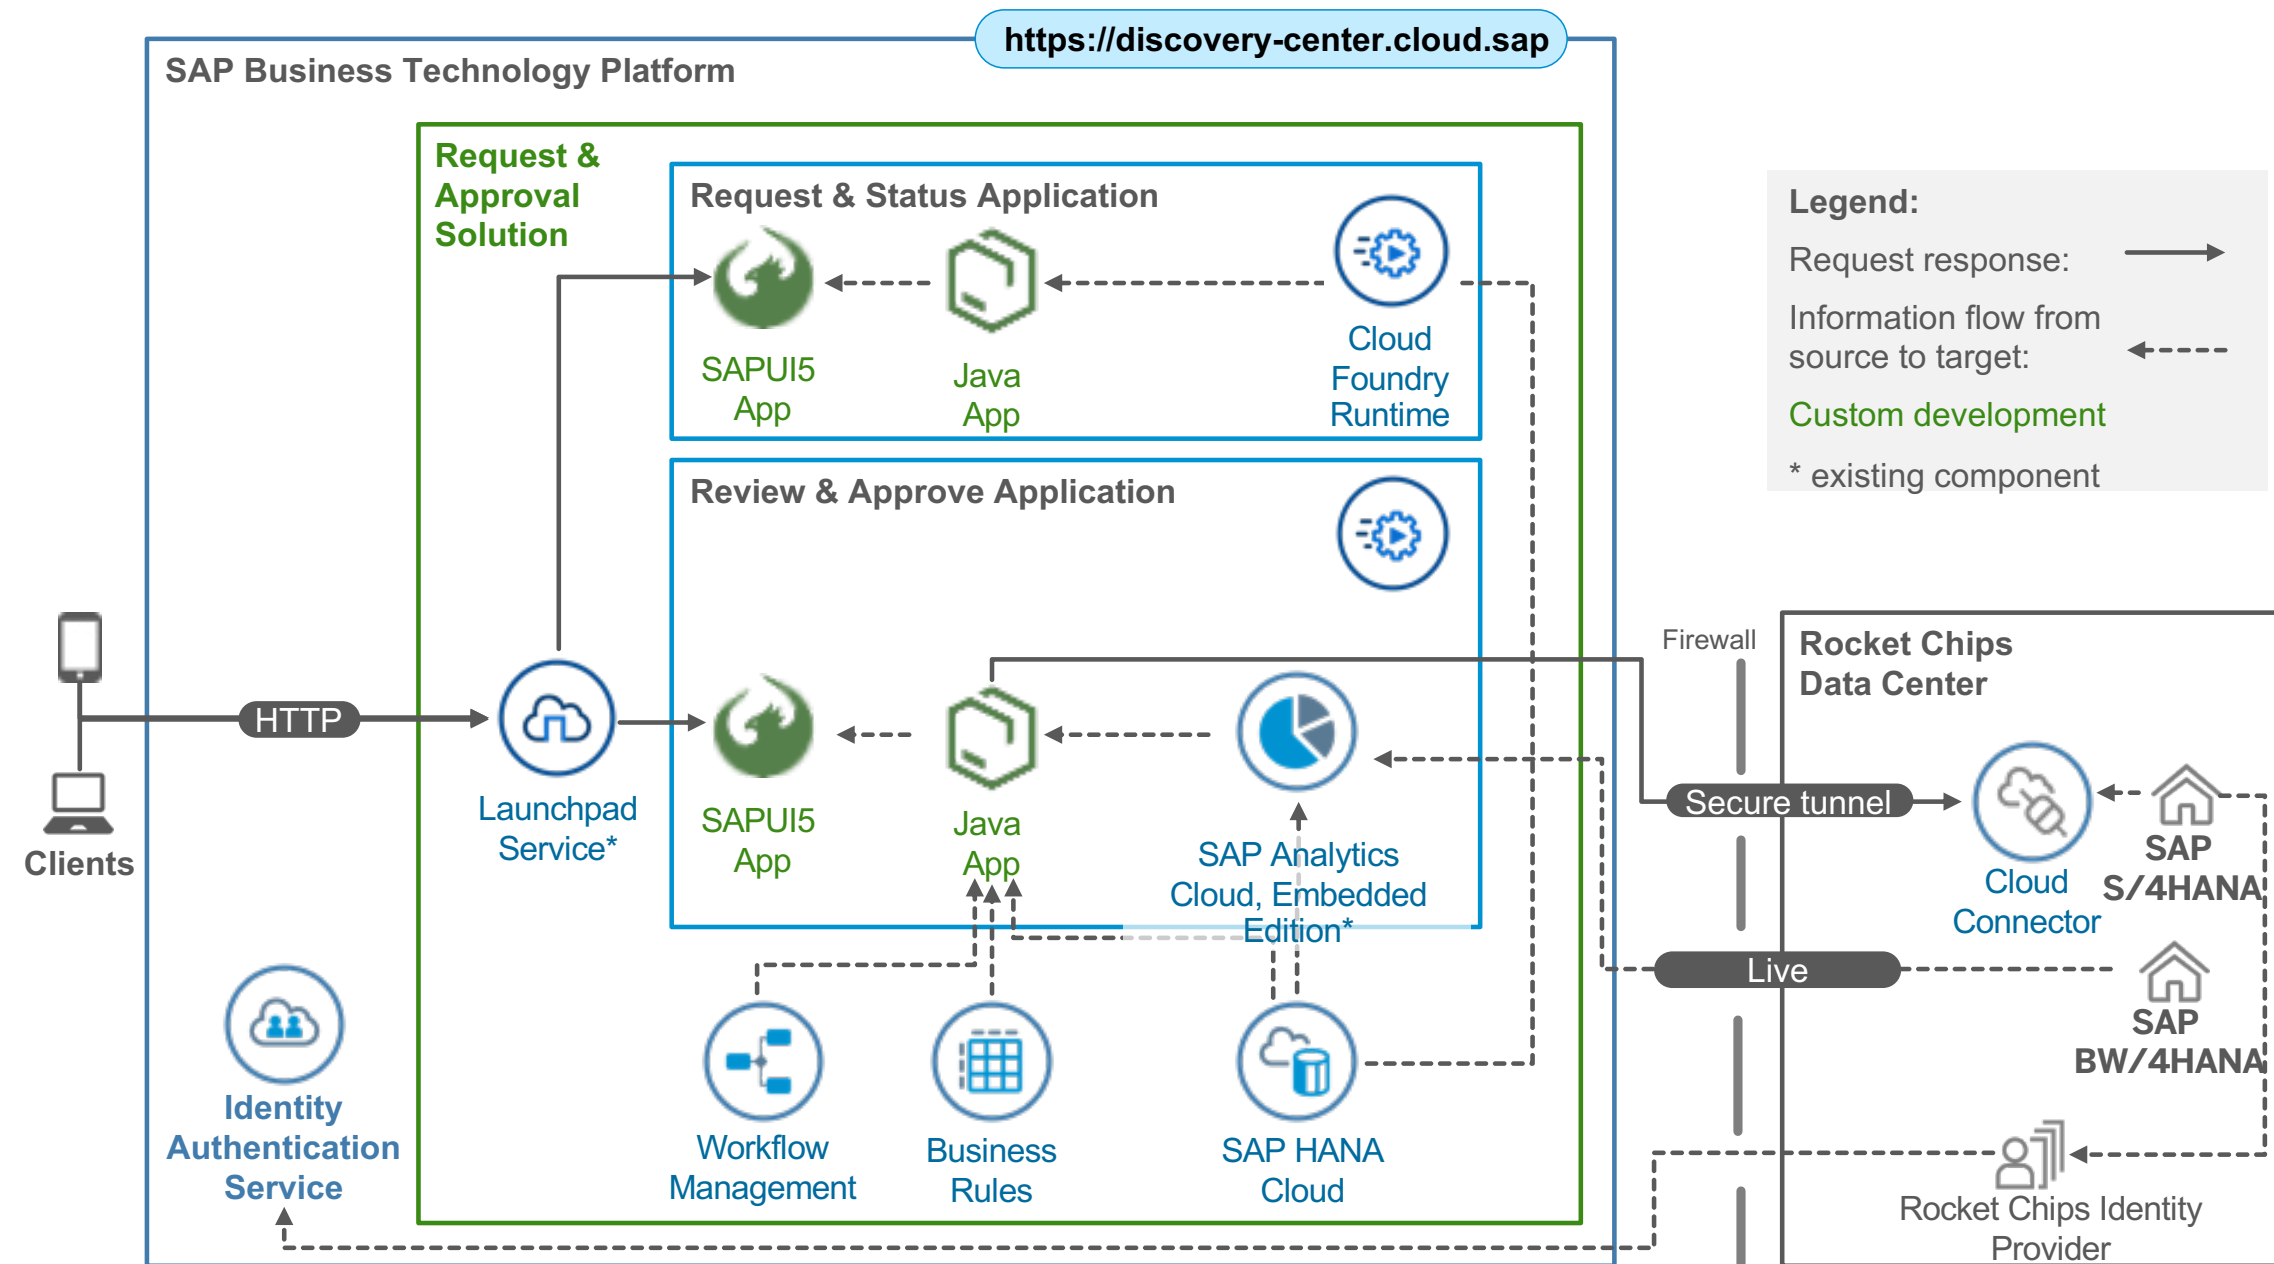

There are two sources of Solution Building Blocks:

(1) Based on the [Baseline Solution Architecture](#) you perform a Fit-Gap-Analysis, identifying Solution Building Blocks that are already in place and can either be completely or partly re-used in your Solution Realization.  
(2) SAP Business Technology Platform services (e.g., via [SAP Discovery Center](#)).

The mapping of Solution Building Blocks to Architecture Building Blocks depends on the experience and knowledge in the team (experience-based mapping). Publicly available information/ documentation can be consulted about the Solution Building Blocks for doing the mapping. Reference architectures solving a similar problem or addressing parts of your request of architecture work are also good sources for doing the mapping. Use [BTP service icons](#) to draw the diagram.
