

DESIGN PHASE / Solo Activity

Solution Concept Diagram

A high-level representation of the aspired solution via Architecture Building Blocks.

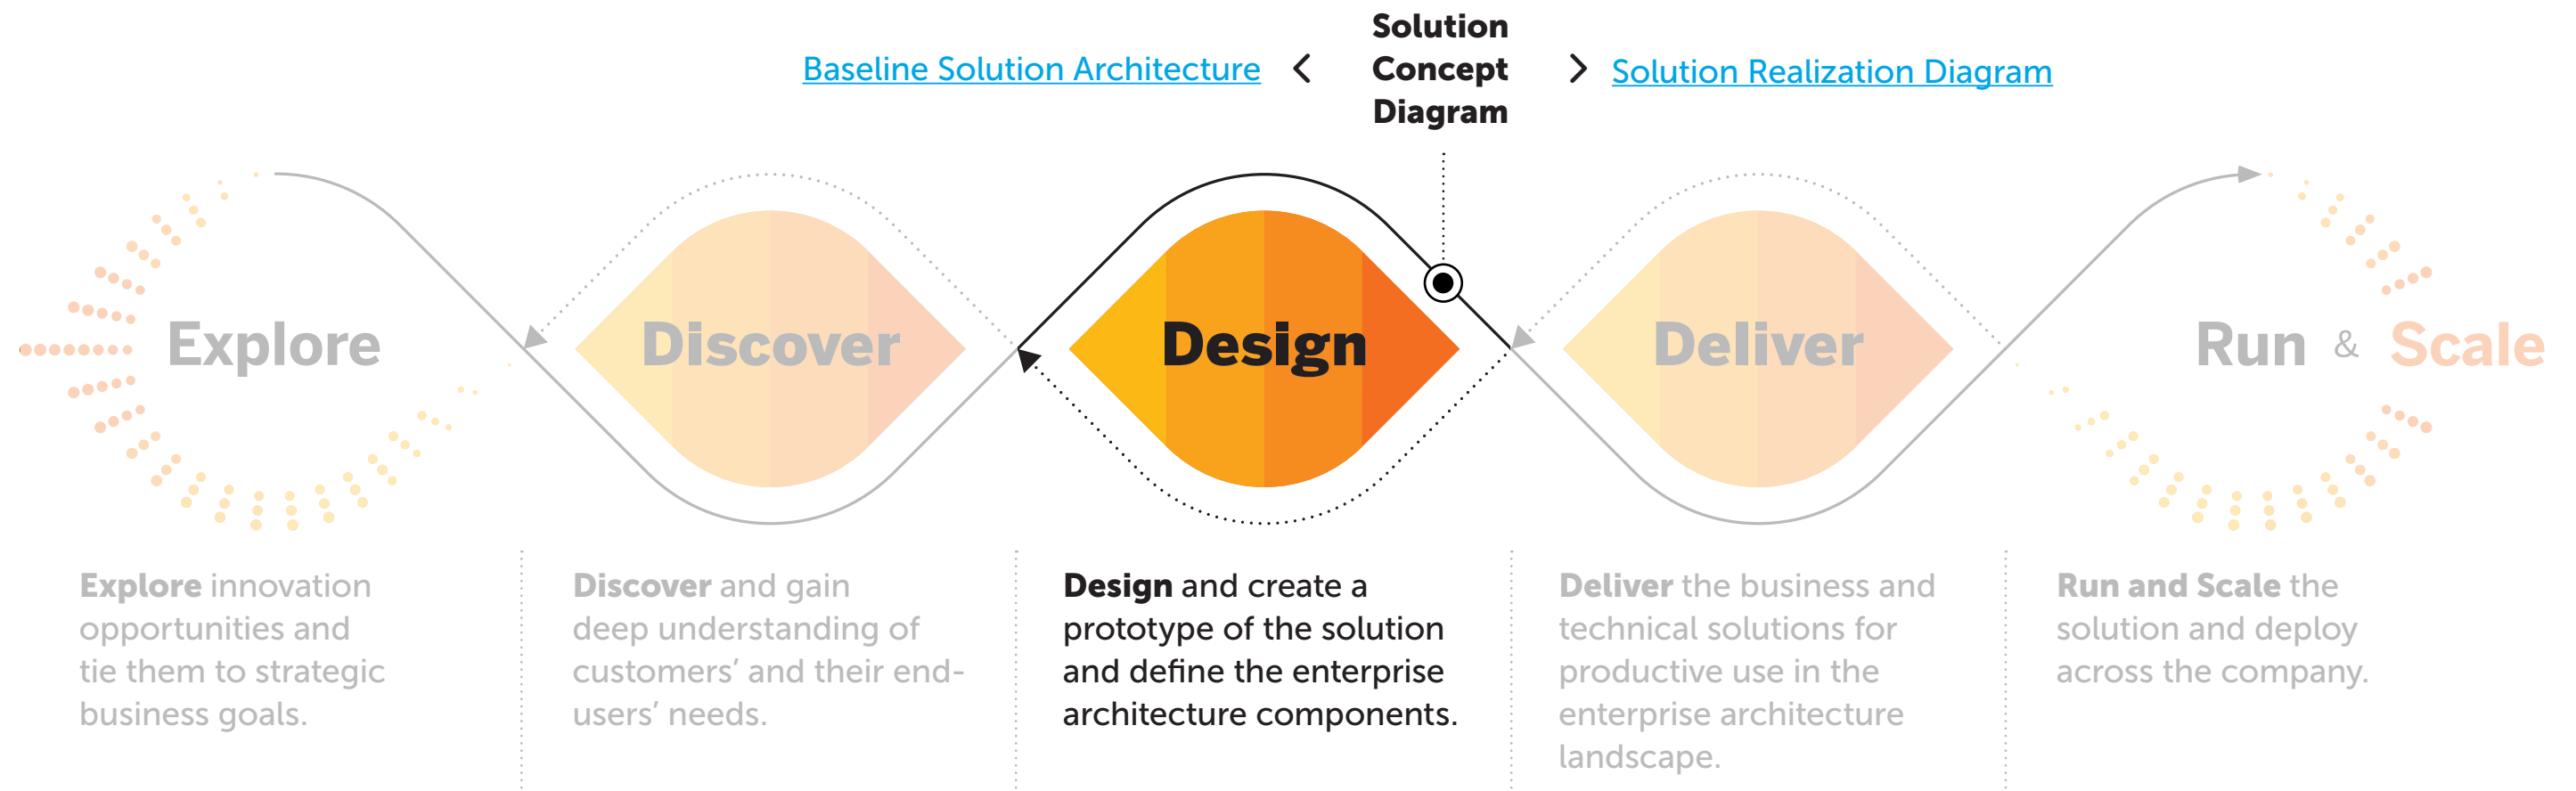

Why to create a Solution Concept Diagram?

The Solution Concept Diagram is a transition step between the [Solution Context](#) and the [Solution Realization Diagram](#). It is a macro version of your architecture, mainly comprised of vendor-neutral Architecture Building Blocks.

The purpose of the Solution Concept is to provide a high-level representation of your solution. This is envisioned in order to meet the requirements of your architecture engagement. You can consider the solution concept as a “pencil sketch” of your expected solution based in Architecture Building Blocks (ABBs).

When to create a Solution Concept Diagram?

The Solution Concept Diagram is created during the Design phase after the [Baseline Solution Architecture](#).

How to create a Solution Concept Diagram?

Duration
30 - 60 Minutes

Participation
1 - 3 People

Roles
Architects

Use input from

- [Solution Context Diagram](#)
- [Baseline Solution Architecture](#)

Steps

1

Identify high-level architectural building blocks that are needed to satisfy the key objectives and business capabilities as described in the [Solution Context Diagram](#). Translate the business-oriented capabilities describing the aspired solution in the Solution Context, to respective Architecture Building Blocks (ABB).

2

Outline the relationships between the identified building blocks. Relationships can be of type request-response or information flow.

3

Add users, roles, and organizational units including their relationship to the architecture building blocks.

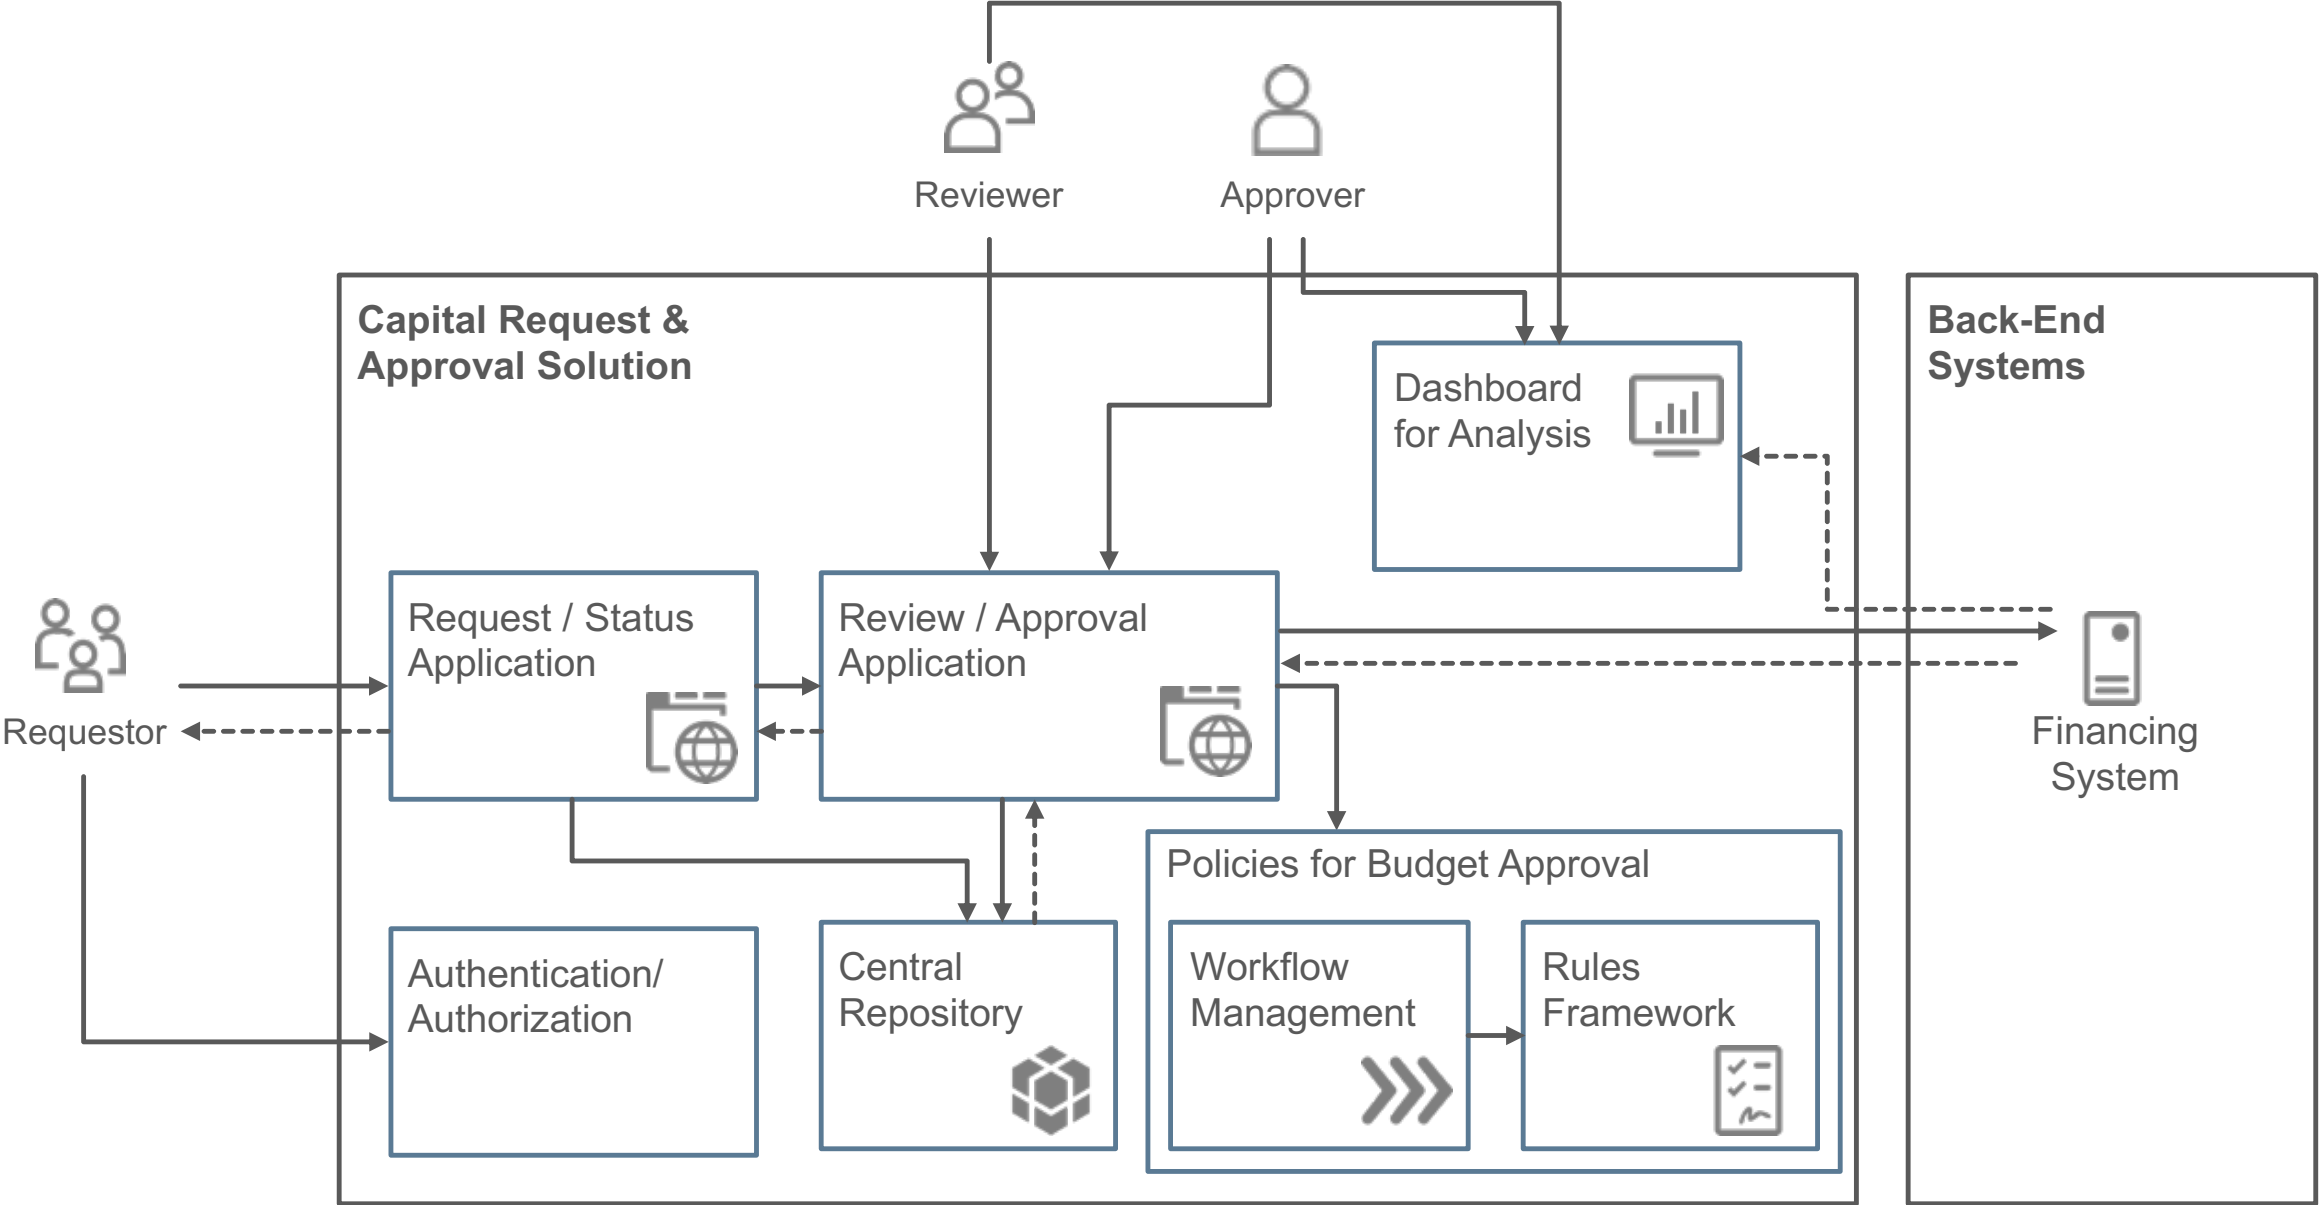

Expert Tips

By mapping the capabilities of the aspired solution to Architecture Building Blocks, it might be the case that one business capability directly translates to one ABB. It might also be the case that one business functionality translates to many ABBs related to each other.

To ensure the quality of the Solution Concept Diagram, check if all required business capabilities are addressed with corresponding ABBs.
